Azure Current State Assessment

Assess Your Environment. Secure Your Platform. Optimise for Growth.

bluesource

As cloud adoption accelerates, organisations often find themselves navigating complex Azure environments built over time, sometimes without consistent structure, governance, or cost controls. Without full visibility into the current state, risks can remain hidden, costs can rise unnecessarily, and scalability may be limited.

Microsoft Solutions Partner

The Azure Current State Assessment helps organisations take control of their Microsoft Azure platform. By evaluating existing configurations, governance practices, and resource usage, the assessment provides a clear picture of your environment's strengths, weaknesses, and opportunities for improvement, ensuring it is secure, compliant, and optimised for the future.

Methodology

This engagement takes a practical, structured approach aligned with Microsoft's best practices:

1. Discovery & Analysis

We perform a high-level diagnostic review of your Azure environment, including:

- Subscription and resource inventory
- Identity, access, and role-based control models
- Azure Policy configuration and enforcement
- Networking and connectivity structures
- Security posture and potential vulnerabilities
- Governance and compliance alignment
- Cost and resource utilisation patterns

2. Expert Evaluation

Our cloud specialists evaluate your environment against proven and established practices, focusing on areas such as:

- Security and compliance risks
- Operational inefficiencies
- Misaligned governance structures
- Underutilised or overprovisioned resources

Azure Current State Assessment

Assess Your Environment. Secure Your Platform. Optimise for Growth.

bluesource

Deliverables:

You'll receive a tailored Assessment Report that includes:

- Overview of current Azure environment configuration
- Summary of key findings and areas of concern
- Recommended remediation actions to align with best practices
- Governance and security improvement opportunities
- Optimisation recommendations to support cost savings
- Guidance on next steps for remediation, reconfiguration, or migration planning

Outcomes

You'll receive a tailored Assessment Report that includes:

- Understand how current Azure configurations compare to best practices
- Gain visibility into potential security and compliance gaps
- Identify opportunities to optimise cost and improve operational efficiency
- Be equipped with expert guidance to shape your future Azure roadmap

Key Benefits

- Visibility & Control

Gain a clear, actionable view of your current Azure environment

- Security & Compliance Readiness

Uncover risks and define steps to align with regulatory and internal security standards

- Cost Optimisation

Identify areas for potential savings through right-sizing and improved resource utilisation

- Governance & Best Practice Alignment

Discover how our **Azure Current State Assessments** can support your next IT transformation.
