Copilot Data Security Assessment

Microsoft Copilot is adopted across the enterprise to drive productivity through AI, organisations must ensure their data landscape is secure, governed, and appropriately configured.

The Copilot Data Security Assessment provides a detailed evaluation of your Microsoft 365 environment, focusing on identifying misconfigurations, data exposure risks, and gaps in governance that could undermine Copilot's safe use. This service ensures your environment is Al-ready and **compliant** with modern data security standards.

Methodology

Our assessment is based on a structured, multilayered analysis of Microsoft 365 workloads and configurations that directly influence Copilot's access and behaviour. The process includes: .

Configuration Review

Analysis of Copilot-specific settings within the Microsoft 365 Admin Centre, including control systems, access permissions, and action restrictions.

Security Architecture Deep-Dive

Inspection of SharePoint Online (SPO) to identify inherited and broken permissions, exposing data at file, folder, and site levels.

Governance Controls Review

Evaluation of Microsoft Purview settings such as sensitivity labels, DLP policies, and data lifecycle management.

Al Security Posture Management

Use of Data Security Posture Management (DSPM) tools for AI to monitor Copilot prompt activity and prevent unauthorised AI use.

Microsoft Teams Configuration Review

Review of Teams access and sharing policies relevant to Copilot's integration.

Outcomes

By the end of the assessment, your organisation will receive a clear understanding of: The process includes:

- How Copilot is currently configured and what it can access
- Where sensitive data is at risk due to broken or overly broad permissions
- Gaps in governance that may impact compliance or responsible AI use
- Actionable recommendations to strengthen your AI readiness and data protection posture

Key Benefits

- AI-Ready Foundation
- Risk Mitigation
- Compliance & Governance
- Tailored Insights
- Expert Partnership

Discover how our Copilot assessments can support your next IT transformation.

Copilot Data Security Assessment

Microsoft Copilot is adopted across the enterprise to drive productivity through AI, organisations must ensure their data landscape is secure, governed, and appropriately configured.

The Copilot Data Security Assessment provides a detailed evaluation of your Microsoft 365 environment, focusing on identifying misconfigurations, data exposure risks, and gaps in governance that could undermine Copilot's safe use. This service ensures your environment is Al-ready and **compliant** with modern data security standards.

Deliverables

You will receive a tailored report with the following components:

Admin Centre Review:

Copilot control systems, user and data access settings, prompt/action permissions

SPO Security Findings:

- Files and folders with direct access
- o Sites, libraries, and documents with broken inheritance
- o Items shared via public or internal links
- Folder and document-level unique permissions

Governance Review (Purview):

- Sensitivity labels and classification
- DLP and retention policies
- Data lifecycle management
- o DSPM for AI usage and enforcement

Microsoft Teams Insights:

Access and sharing settings related to Copilot usage in Teams

Recommendations Report:

Step-by-step remediation guidance to close identified security gaps and strengthen governance
