Microsoft Intune Current State Assessment

Gain clarity and control over your Microsoft Intune environment. Our Current State Assessment helps you understand how your endpoint management is configured today, identify areas for improvement, and lay the foundation for a secure, compliant, and optimised modern workplace.

Methodology: Tailored, Flexible, Insight-Driven :

Our approach is designed to adapt to the maturity and complexity of your environment. We combine technical discovery with expert analysis to assess core areas of your Microsoft Intune setup.

We start with a high-level review, then deepen our analysis as needed. For larger or more complex environments, we may recommend a second-phase deep dive to focus on areas requiring further attention

Focus Areas (depending on environment maturity): :

Attendees will gain an overarching understanding of the various components of the Defender suite:

1 - Tenant-Level Review

- Tenant configuration
- Integration points including PKI, AD and Defender
- Conditional access policy configuration related to endpoint management
- Role based access control
- Device tagging

2 -Windows Management

- Endpoint compliance approach
- Inactive device review
- Endpoint enrolment approach including Autopilot
- Endpoint configuration approach including conflicts and failures review and LAPS
- Windows Autopatch / Update for Business
- Endpoint security baselines
- 3rd party app patch approach

4 -App Protection & Conditional Access

- App protection (BYOD), scoping and targeting
- App deployment success rate review
- Enforcement effectiveness across platforms

3 - macOS, Android & iOS Reviews

- Endpoint enrolment approach
- Inactive device review
- Endpoint configuration approach including conflicts and failures review
- SSO, update policy, and security baseline review

Microsoft Intune Current State Assessment Cont...

Focus Areas (depending on environment maturity):

Attendees will gain an overarching understanding of the various components of the Defender suite:

5 - Tenant-Level Review

- SCCM co-management / tenant attach
- Entra mobility settings and external service integrations

Expected Outcomes :

- A clear view of how Intune is currently configured across all platforms
- Identification of gaps, misconfigurations, or legacy practices
- Visibility into security posture, compliance enforcement, and endpoint hygiene
- Actionable insights into profile, policy, and deployment efficiencies
- Recommendations aligned to Zero Trust and modern device management best practices

Deliverables

You will receive:

- Executive summary report
- Technical findings with risk breakdown
- Configuration gaps and optimisation insights
- Prioritised recommendations
- Roadmap for improved governance, compliance & operational maturity
- Optional workshops or deep dives based on focus areas

Key benefits

- Strengthen endpoint security across devices
- Improve compliance and audit readiness
- Optimise device management for scale and performance
- Support initiatives like BYOD, Autopilot, Zero Trust
- Empower your internal IT team with focused next steps
- Reduce risk and gain control over your modern workplace environment
